

RELEASE RISK INTELLIGENCE REPORT

NOVA STATION

0.97

HIGH RISK

Executive Summary

Nova Station — Engine v1 Risk Assessment

0.97 RISK SCORE	D+2–7 LEAK WINDOW	\$344.0M– \$419.6M REVENUE RANGE	82% CONFIDENCE
---------------------------------------	---	--	--------------------------------------

RECOMMENDED: GLOBAL DAY-ONE

Global Day-One is the recommended strategy — piracy risk 0.97 vs 0.97 for the weakest option, with estimated net revenue \$402.3M–\$507.4M (+\$0.0M vs current worst-case). Marginal but consistent advantage across all scenarios.

Simulation Inputs

Genre	Action	Hype Level	High
Current Strategy	Staggered	Budget	\$180.0M
Engine Version	v1 — single source of truth	Confidence	82%

Strategy Comparison

All 3 Strategies — Engine Output

STRATEGY	RISK	RISK LEVEL	REVENUE RANGE	LEAK WINDOW	CONFIDENCE
Global Day-One REC	0.97	HIGH	\$402.3M–\$507.4M	Day 8–16	79%
Staggered CURRENT	0.97	HIGH	\$344.0M–\$419.6M	Day 2–7	82%
Streaming Delay	0.97	HIGH	\$348.1M–\$464.2M	Day 5–12	74%

Revenue Range Comparison

CINERISK ENGINE v1

Engine Explanation

Why This Result — Staggered

The following explanation is generated directly by the engine's logic layer, not post-hoc rationalisation. Every factor below contributed to the risk score above.

01	Action films carry high base piracy sensitivity (72%) — they attract disproportionate piracy attention due to high demand and global fan bases.
02	High hype accelerates piracy spread velocity by 45% — high-buzz titles are prioritised by piracy networks within hours of first leak.
03	Staggered release creates a 52% piracy window penalty — excluded regions have high demand but no legal access, making piracy the default.
04	Combined risk score 0.97 — HIGH. Immediate strategy review recommended before locking release calendar.

Model Confidence: 82% — This score reflects the reliability of the engine's prediction for this specific genre/hype/strategy combination based on the confidence table calibrated against historical comparable title data. Revenue figures are ranges, not point estimates. All outputs are from Engine v1 — identical to dashboard figures.
