

CINEOS × RaptorX — Partnership Proposal

India Fraud Intelligence — Two Layers, One Network · May 10, 2026

Why This Partnership Makes Sense

RaptorX detects fraud in **bank transactions**. CINEOS detects fraud in **Telegram channels and social media**. These are two different layers of the same fraud network. A fraudster who runs @IPLBetting on Telegram with 9,610 subscribers also processes payments through UPI. RaptorX sees the transaction. CINEOS sees the channel. Together we see the complete operator.

Layer	RaptorX	CINEOS	Combined
Transaction graph	✓ Bank/UPI data	✗	✓ Complete picture
Social intelligence	✗	✓ 354 channels, 11M subs	✓ Complete picture
Phone attribution	Partial	✓ From Telegram	✓ Full chain
Mule detection	✓ Transaction patterns	✓ Channel patterns	✓ Both signals
India coverage	✓ Payments	✓ Telegram+Social	✓ End-to-end
Languages	English	6 Indian languages	✓ Complete
Clients	Banks, fintechs	Brands, govt, OTT	All of India

Real Case — Operator Cluster Confirmed

CINEOS has already confirmed a real operator cluster. Phone +91-8441916068 runs both @IPLBetting (9,610 subs) and @ipltossmatchsessionn (9,610 subs). RaptorX could trace the UPI transactions from these channels to reveal the complete money flow. This is exactly the combined intelligence that SEBI and ED need.

Integration Options

API Integration: CINEOS phone/channel data → RaptorX graph enrichment. When RaptorX flags a suspicious UPI, CINEOS checks if that phone appears in any fraud Telegram channel.

Shared Intelligence Feed: Weekly fraud operator report combining RaptorX transaction signals + CINEOS channel signals. Sell to banks, NPCI, PhonePe, Paytm.

Joint Government Pitch: SEBI, MHA, ED all need both layers. Joint proposal = stronger than either alone. Government contract Rs 2-5 Cr/year.
